

Stock assessment of sockeye salmon from the Buskin River, Kodiak, Alaska, 2004

Abstract: Salmon weirs were operated on the Buskin River drainage on Kodiak Island, Alaska, from May 17 – August 15, 2004 to enumerate sockeye salmon *Oncorhynchus nerka*. A total of 22,023 sockeye salmon, the second largest recorded escapement, were counted into Buskin Lake. A total of 2,086 sockeye salmon were also counted into the Lake Louise tributary. The midpoint of the Buskin Lake run occurred on June 13; the midpoint of the Lake Louise tributary run occurred on July 29. Most sockeye salmon in the Buskin Lake escapement were aged 1.3, 2.2 or 2.3; salmon in the Lake Louise tributary run were aged 1.2 and 1.3. The preliminary 2002 subsistence harvest was 10,804 sockeye salmon, most of which were aged 1.3 or 2.3.
