

Yukon Flats National Wildlife Refuge

Bird Checklist

The Yukon Flats National Wildlife Refuge consists of 8.6 million acres and encompasses the Yukon Flats basin. This basin is located along the Arctic Circle and is bordered by the Brooks Range to the north and the White Mountains to the south. It includes 300 miles of the Yukon River, North America's third longest river. An estimated 20,000 shallow lakes, ponds, and sloughs; and 7,000 miles of rivers and streams are within the Yukon Flats National Wildlife Refuge.

The rich wetlands of the Yukon Flats provide some of the most productive waterfowl breeding areas in North America. It is estimated that 1.5 million ducks breed here annually. The Yukon Flats also include a variety of other habitats such as white spruce, paper birch, and quaking aspen forests; black spruce bogs; willow and alder thickets; grasslands, meadows, and alpine tundra. These habitats are important to songbirds, waterbirds, raptors, and upland game birds.

The following checklist of 160 species has been compiled from Refuge observations and published records. If you have information that could be used to update this list, please contact:

ABUNDANCE (AB)

- A - Abundant; very numerous
- C - Common; certain to be seen or heard in suitable habitat
- U - Uncommon; locally distributed; or occurring in low numbers
- R - Rare; species occurs regularly in the region but in very small numbers; sighting likelihood poor
- O - Occasional; seen a few times in a five-year period
- + - Accidental; seen once or twice; may not be seen again

STATUS (ST)

- Y - Year-round resident
- B - Breeding species (migratory)
 - * Breeding has been documented through observation of eggs, nests, or dependent (unfledged or recently fledged) young
- M - Migrant; non-breeder traveling between summer and winter range
- V - Visitor; outside its normal range
